

## READY TO WORK

Billon's Unique and Innovative DLT Solution for Verifying Training, Credentials and Immunity

### Key Benefits

Ready to Work Platform aims to deliver significant benefits on the onboarding processes:

**Significant efficiency in certificate validation**

**Secure document storage and management**

**Cost reduction and demonstrable ROI**

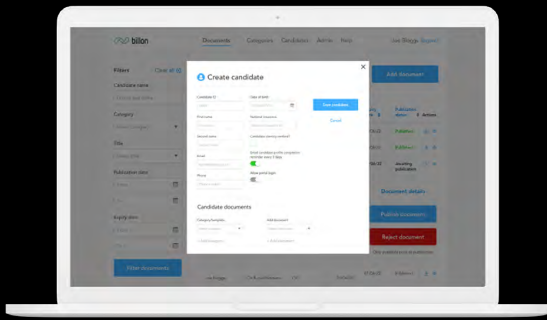

'Ready to Work Platform' is a web and mobile app platform that securely and immutably stores onboarding documents and manages candidate compliance to provide proof of eligibility to work. The platform aims to support a safe and compliant working environment for candidates and clients alike.

The platform, already developed as a prototype, allows businesses and recruitment agencies to certify and validate onboarding documents for workers such as such as medical test results, training certificates and other onboarding documents.

### Key Features

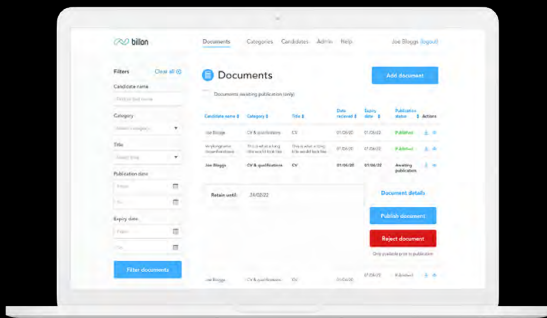

- **Decentralized and immutable data storage**  
Once a certificate is linked to an ID and stored, it cannot be modified by any participating party. The certificates are retrievable at all times while valid and can be revoked or programmed to expire.
- **Secure data exchange**  
The solution enables highly secure, fraud-resistant document sharing and verification for documents, whilst also protecting the privacy and integrity of the
- **Full traceability of document lifecycle**  
Verifiable record of the source, access and usage providing solid assurance through established history of all data
- **Interoperability**  
The entire technology stack is ready to use upon connection of the R2W DocStore App to any of your existing training or CRM systems with an API or SDK
- **Digital identity management**  
ID verification secured by next-gen client-side cryptography providing another layer of security to personal information.

# R2W DocStore App User Journey

1

Agency creates the candidate account on 'Ready To Work Agency Portal'. Login details for the candidate to access the portal is sent in an email.

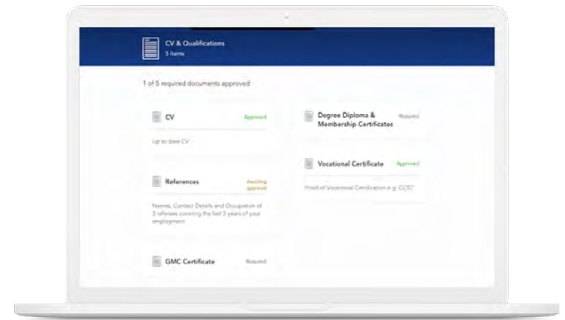

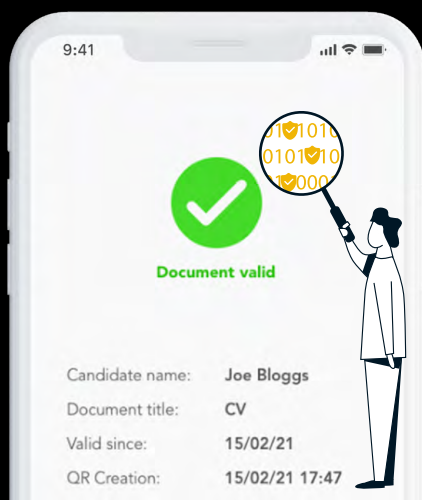

3

Agency reviews the uploaded documents, verifies the authenticity and publishes to DLT.

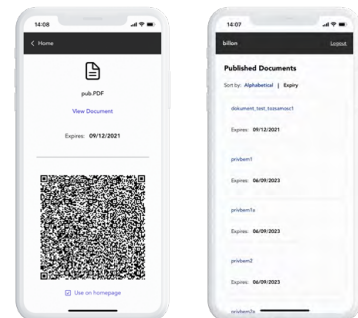

5

Candidate can display certificates on the mobile app. QR code can be scanned to show the validity of the document, if required.

2

Candidate can upload the required documents to send to the agency through the candidate portal.

4

Candidate is able to access documents published to the DLT through a secure mobile app.
