TRUSTED DOCUMENT MANAGEMENT

DLT solutions eliminating paper

Billon's mission is to unleash the transformational capabilities of DLT with a high-performance system for Trusted Document Management.

Elimination of paper and reduction of cost and complexity with a highly secure and regulatory compliant solution.

Ultimate evidence of **proof of delivery** and guaranteed real -time confirmation

Immutability, integrity & authenticity of data and documents

Simple "one – click" mobile or web app for consumers

Irrefutable owner revision control with **built-in audit trail**

SEND / STORE / SIGN / SHARE / VERIFY immutable documents with minimal administration

Send
Confidential and provable business communication for public and private documents

Store
Decentralized "on-chain", immutable documents and data

Sign
E-signature on contracts linked to validated identity on ledger

Share
Secure data exchange of one source of truth, with verifiable record of the provenance, access and usage

Verify
On-line verification of document origin and ultimate confirmation of the authenticity of documents.

Capabilities

Nodes

- Automated document import via APIs
- Mass publication
- Cloud hosting options
- Customizable notification services
- Light nodes can operate on portable devices

Documents

- Decentralized on-chain storage
- Document persistence control
- Document version comparison
- Active delivery attributes
- Remote signature linked to identity
- Irrevocable timestamping

Governance

- Regulatory compliance for GDPR and durable medium
- Full support to user driven execution of the right to be forgotten
- Access rights controls
- Multi-keys atomic data encryption

BENEFITS

Billon's DLT is specifically designed to deliver tangible business savings, eliminating the risk of document security, and to support new revenue streams.

Allows for fully digital blockchain-based contracts with remote signature, active delivery and KYC on-boarding process.

One complete enterprise - grade solution for digital data & document management reducing **time and costs.**

Fulfills regulatory requirements for MIFID II (durable medium) and GDPR – enabling identity protection and the right to be forgotten.

Reduces cost of IT infrastructure for better storage, backup, replication, and disaster recovery.

Maximizes data security with minimal IT administrative costs as clients manage own keys integrated into own devices.
